Utusan's 'Sure Heboh'... (7)

A classic example of people who benefit from hindsight but early responses to PM's clarification of his [statement on SJKC](#) that has been misconstrued are starting to pour in.

(1) *Utusan Malaysia* should be rapped for stirring up racial sentiments

"I worry about my child and the Internet all the time, even though she's too young to have logged on yet. Here's what I worry about. I worry that 10 or 15 years from now, she will come to me and say 'Daddy, where were you when they took freedom of the press away from the Internet?'"

--Mike Godwin, [Electronic Frontier Foundation](#)

Press enquiries should be directed to [Ian Clarke](#).

Philosophy **Financial Status**

Support
 The project's current Paypal balance is **\$340.00**. The project requires approximately \$2,300 per month to pay for its full time developer, Matthew Toseland. If you would like to help support the Freenet Project, you can make a convenient donation through our [donations page](#).

People **News**

8th November, 2004 : Unofficial Freenet RPMs now available

Freenet developer Mika Hirvonen has put together some RPMs of the Freenet stable and unstable builds which Fedora users can install and upgrade conveniently using Yum or Apt-rpm. You can find further information [here](#).

27th October, 2004 : Stable build 5099, Stable network reset

Stable build 5099 has been released, all users running the stable branch should upgrade as this build

Cooperative Association for Internet Data Analysis - CAIDA

San Diego Supercomputer Center, University of California, San Diego. We introduce the area of **remote physical device fingerprinting**, or fingerprinting a physical device, as opposed to an operating system or class of devices, remotely, and **without the fingerprinted device's known cooperation**. We accomplish this goal by **exploiting small, microscopic deviations in device hardware: clock skews**. Our techniques do not require any modification to the fingerprinted devices. Our techniques report consistent measurements when the measurer is **thousands of miles, multiple hops, and tens of milliseconds away** from the fingerprinted device, and when the fingerprinted device is connected to the Internet from different locations and via different access technologies. Further, one can apply our passive and semi-passive techniques when the fingerprinted **device is behind a NAT or firewall**, and also when the device's system time is maintained via NTP or SNTP. One can use our techniques to obtain information about whether **two devices on the Internet, possibly shifted in time or IP addresses, are actually the same physical device**. Example applications include: computer forensics; tracking, with some probability, ... and unanonymizing anonymized network traces.
